**Key Skills:** React, TypeScript, JavaScript, CSS, HTML, Node.js, Express.js, REST, ASP.NET, C#, Entity Framework, GraphQL, SQL, Java, C, Git, GitHub

## About

---

Hi, nice to meet you! I'm passionate about creating digital solutions that improve and simplify. With the work ethic of a busy little ant 🐜, I always strive to deliver high-quality, robust, and scalable code, while making the user experience as essential as your morning coffee.

## Work Experience

---

### QA Summer Intern @ Nasdaq

2023

I was responsible for evaluating how various frameworks (e.g. Selenium & Playwright) for automated E2E-testing could be implemented in one of their clearing solutions, Nasdaq Real-Time Clearing. This resulted in three test suites in different frameworks, and a comprehensive report which became a solid foundation for future work.

### Curiosum - Umeå University

2022 - 2023

I was responsible for welcoming visitors, facilitating workshops, and coordinating activities as a visitor guide at the Science Center during weekends and evenings.

## Education

---

### Umeå University, M. Sc. - Interaction Technology and Design

2019 - 2024

During this time, I learned a lot about how technology can be used to create digital solutions that truly make a difference for people. "Makes you an expert in the interaction between humans and machines"

### Omegapoint - Master Thesis

2024

I investigated how different aspects of usability affects the perceived security of websites. To do this, I built a fictional E-banking solution with a frontend in React and backend in Node + Express & MongoDB, which was then deployed in AWS.

## Other Experience

---

### Umeå Budoklubb - Frontend

2023

As part of the course "Software Engineering", 40-50 students in eight different teams developed a planning tool for a local martial arts club. I took the initiative to organize a workshop for the entire group on the basics of React, which was well-received by many students and contributed to the project's success. Furthermore, I participated in meetings with the client, acted as Scrum Master during two sprints, and took part in the overall design and development work.
